

# WORKSHOP 7 TERRARIUM PODS

Spring is all around us – why not bring some of the greenery with you inside, next time you're out!

Today we'll make some wee recycled plastic terrariums so you can do just that – bring some **plants** or even 'weeds' indoors – and watch them grow!

plastic bottles of all  
sizes and colours

WHAT YOU'LL NEED:

HOLE PUNCH  
if you have one

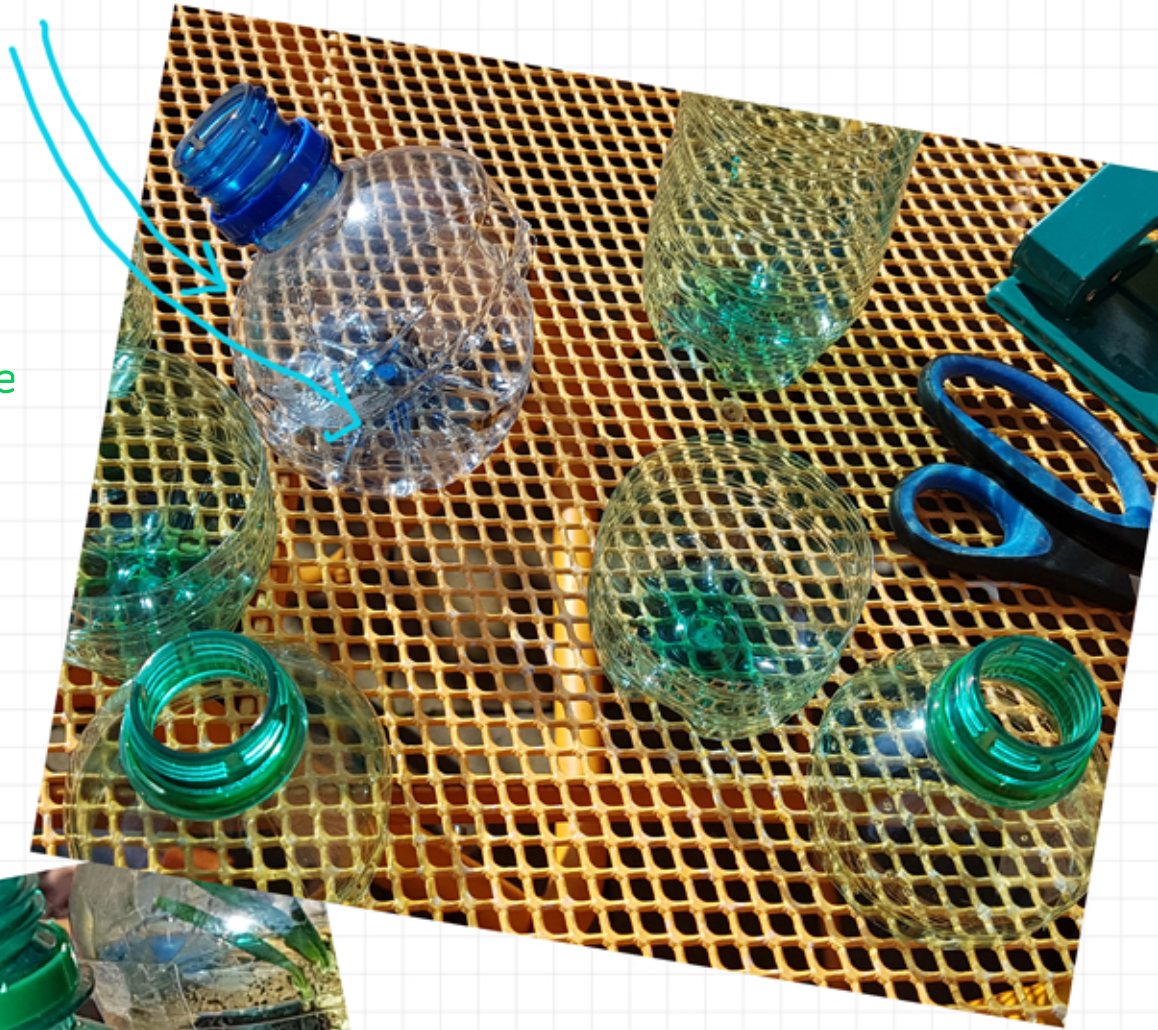

SCISSORS

THAT'S  
ALL!

also: TAPE AND ANY HOUSEHOLD STRING  
(not in the picture)

START by cutting the bottles in half, and then cutting a middle section of the bottle out.

these will make the bottom and the lid of your pod

NEXT: you can make two holes on both sides of the bottle, on the lid and the bottom parts, and use a string to make a wee hinge, so you can open and close your pod.

NO WORRIES if you don't have a hole punch – you can use just a piece of tape too!

then just fill the pods  
with soil, seeds, bulbs,  
flowers, weeds...

SCOOOP up some grass, when  
you're out!

put some toys or  
figurines inside,  
and make a mini-jungle!

## HAPPY PODDING, ALL!

...will the plants grow  
through the top..?

... put them on a window in a row...!
